MELDING INNOVATION WITH RESTORATION

The Fulton Center project used modern design to ease the commuter experience and restored a historic structure that forms part of the transit hub **BY ALISA ZEVIN**

NEW

CONNECTIONS

The Fulton Center connects 11 subway lines, previously split into six individual stations.

The \$1.4-billion Fulton Center is a major portal into the New York City subway system, with 300,000 travelers passing through the transportation hub each day. Located in lower Manhattan, the Fulton Center was designed with the goal of enhancing the commuter's experience by connecting six formerly separate subway stations. The project's design team included more than 35 design, engineering and construction firms.

The center improves connectivity between 11 subway lines and also provides a connection to the interstate PATH train.
